Yellow Point with RFID Makes Jobs Safer!

YOKE has been continuously challenging ourselves to offer better solutions for enterprises to create a safer working environment.

Yellow Point has replaced hundreds of thousands of eyebolts and many risky lifting points around the world. YOKE has gone further to develop its safety feature, now with a RFID chip embedded as a standard specification for enterprises to execute better management on a daily or periodic inspection, which is required by DGUV GS-OA-15-04, ASME B30.26 or other national and international regulations.

Unlike other RFID chips that need a specific reader to read its unique ID number (also known as "Universal ID" or "UID"), YOKE use pioneering technology to make the chips readable by NFC even while being embedded in the steel, which is prevalent in the smartphones. It will allow immediate access to the latest inspection result and a pre-lift check in the field.

Check with your local YOKE supplier and ask for Yellow Point. Below is the series that are available with RFID immediately:

- 8-211 / 8-212
- 8-231 / 8-232
- 8-251 / 8-252
- 8-271 / 8-272
- 8-281 / 8-285
- 8-291K / 8-292K
